The weather in January 1886 was cooler than usual, the mean shade temperature, 77.5°, being 1.4° under the average of the month for the last ten years, and 2.0° under the average of the previous three years. The highest reading in shade, 96.0°, was on the 9th; the lowest on grass, 62.0°, was on the morning of the 3rd. The mean barometric reading, 29.979 inches, was 0.079 inches over the average of the month for the last ten years; the highest reading 30.178 inches was at 9 a.m. on the 14th, and the lowest, 29.493, at 3 p.m. on the 27th. Rain fell on 19 days; the total fall, 11.09 inches, being 6.33 inches over the average of the month for the previous ten years. The maximum fall during 24 hours, 3.07 inches, was on the 16th. The rainfall of January, 1885, was 1.61 inches, on 9 days.

Garden, Orchard, and Farm Calendar for January.

Written expressly for Slater's Almanac by Albert John Hockings.

GARDEN AND ORCHARD.—Dig deeply all unoccupied beds, turning in all such garden refuse as will add to the fertility of the soil by its decay. Heavy soil is much improved in texture when thrown up roughly and exposed to the influence of the summer's sun, being rendered more friable. Fork between the rows of vegetables when the soil has become hard after heavy showers. Water vegetables freely in dry weather, giving occasional dressings of liquid manure. In favorable weather, that is just before rain, sow French beans, brocoli, cabbage, carrots, cauliflowers, celery, mustard, cress, lettuce, endive, okra, peas, parsnip, parsley, radish, salsify, scorzonera, prickly spinach, turnips, Brussels sprouts, and a few cucumber, vegetable marrow, and melon seeds for late crop. Plant out cauliflowers, cabbages, &c., laying a leaf over each plant to protect it from the sun for a day or two. Gather herbs for drying, also onions, garlic, and eschalots, as the tops die down. Peach, apple and

other trees should be formed during summer by disbanding with the finger and thumb when the shoots are ill placed, and by nipping off the ends of those which are too long or over vigorous. Vines should be tied as they grow, to protect them from injury by high winds, and in doing this be careful to arrange the foliage, so as to shelter the fruit from the direct rays of the sun. Gather grapes, peaches, and apples, as they ripen. Vigorous shoots of the Isabella grapes may still be pruned to produce a second crop. Vines layered now are likely to make good roots before winter. Cuttings of any valuable new sort which it is wished to multiply quickly, should be put in during this month, in shady or showery weather. Carefully remove suckers from vines and fruit trees.

FIELD.—Destroy weeds before they seed; break up land in preparation for future crops; sow Cape barley, rye, and oats for green fodder, and maize for a late crop. Keep growing crops clean.

FEBRUARY corresponds to August in Great Britain; the weather is generally excessively hot and sultry with a humid atmosphere. In February 1886 the weather was much warmer than usual, the mean shade temperature, 80.3°, being 2.8° over the average of the month for the previous ten years, and 2.2° over the previous three years. The highest reading in shade, 97.0° was on the 2nd; the lowest on grass was 59.0°, on the 20th. The mean barometric reading, 29.910 inches, was 0.049 inches under the average of the month for the last ten years; the highest 30.114 inches, was at 9 p.m., on the 16th, and the lowest, 29.615 inches, at 3 p.m., on the 25th. Rain fell on 6 days; the total fall, 1.98 inches, being 4.40 inches under the average of the previous ten years. The greatest fall in 24 hours, 1.25 inches, was on the 25th. The total rainfall for the year 1886, up to the 28th February, was 13.07 inches on 25 days. The rainfall, during the same period in 1885, was 9.22 inches, on 23 days. The mean rainfall of the month for 26 years was 7.58 inches.

Garden, Orchard, and Farm Calendar for February.

GARDEN AND ORCHARD.—This should be an active month. Dig roughly all unoccupied beds which have been previously trenched, adding well decomposed manure. Transplant cabbages, Brussels sprouts, cauliflower, celery, &c. Sow French beans, beet, Brussels sprouts, carrot, cauliflower, celery, mustard, cress, lettuce, radish, prickly spinach, endive, onion, peas, parsnip, and turnip. Plant out strawberries in ground previously prepared by being trenched and thoroughly manured. Mulch the melon and cucumber holes with a dressing of long stable manure; form the surface between the holes so as to catch water during thunder showers. In very dry weather, when the plants appear to suffer, give ten to twenty gallons of water in the evening to each hole, so that they may be thoroughly soaked, applying the water so that it may get into the soil where the roots are. Gather seeds as they ripen. Cucumbers, melons, French beans, &c., should be gone over daily, and gathered as soon as they are ready, whether they are required or not; for if left on to perfect their

seeds the plants cease to be productive. The fruit should be thinned from Hockings' canvase and greening apples, and the branches carefully propped lest the tree be broken by its weight. Finish budding trees which are intended to stand over until spring. Collect leaf mould for use when planting fruit trees during the approaching winter. Loosen ties of budded trees. Tie up loose shoots of vines, extending them out to the sun; if the points are gathered up to a stake, see that the foliage is not bruised or injured.

FIELD.—Continue to prepare land, ploughing it deeply. Lucerne may be sown in clean, well-ploughed deep soil. Vetches or tares, Cape barley, and sorghum should be sown for green food for stock. In sheltered and warm positions, 90 day maize may be sown. Early potatoes may be planted whole. Sulphate of lime or "superphosphate" applied to the soil greatly increases the health and productiveness of potatoes. Keep the land clean, and hill up maize.

MARCH corresponds to September in Great Britain, and begins to show a pleasant decrease in temperature. In March, 1886, the weather was cooler than usual, the mean shade temperature, 74° 8', being 0° 9' under the average of the month for the previous ten years, and 0° 3' under the previous three years. The highest reading in shade, 97° 0', was on the 9th, the lowest on grass, 54° 0', was on the morning of the 15th. The mean barometric reading, 30.068 inches, was .635 inches over the average of the month; the highest reading, 30.289 inches, was at 9 p.m. on the 2nd, and the lowest, 29.755 inches, at 3 p.m. on the 7th. Rain fell on 12 days; the total fall, 2.34 inches, being 0.90 inches under the average of the month for ten years, and 0.32 inches, under the previous three years. The greatest fall in 24 hours, 1.55 inches, was on the 12th. The total amount of rain that fell in the year 1886, up to the 31st March was 15.41 inches, on 38 days. The rainfall, during the same period in 1885, was 10.76 inches, on 36 days. The average rainfall for the month of March, during the previous 26 years, was 6.20 inches, on 16 days. The greatest rainfall in March, during 26 years, was 34.04 inches, on 26 days, in 1870, and the least rainfall was 0.58 inches, on 7 days, in 1868.

Garden, Orchard, and Farm Calendar for March.

GARDEN AND ORCHARD.—If previous instructions have been followed, the seed beds will be full of young plants, and there will be sufficient land well dug and manured ready to receive them. Plant out cabbages, cauliflowers, Brussels sprouts, celery, &c., in favorable weather, that is just before rain, choosing the largest and finest plants. Keep the beds free of weeds by frequent and deep hoeing. Give asparagus beds a dressing of salt. Transplant eschallots. Sow English beans, French beans, beet, carrot, mustard, and cress, celery, lettuce, endive, leek, onion, peas, parsnip, radish, prickly spinach, turnip, couve tronchuda, savoy, &c. Make note of fruit trees, or vines that have been sickly or unproductive during the season, so that they may be manured, syringed, scrubbed, pruned or grubbed out, as the case may demand. Orange trees are often killed by digging about

them; their roots being principally on the surface. All land intended to be planted with fruit trees during the approaching season should be trenched and manured this month, if not already done. All stiff or retentive soils should be carefully drained six inches deeper than they are trenched, regardless of the inclination of the surface. It should be remembered that the roots of the trees will be under the surface where the water will be retained, unless drainage be provided. Orange trees with the shoots in a state of rest may be transplanted this month.

FIELD.—Sow lucerne, clover, rye grass, prairie grass, oats, barley, wheat, vetches or tares, and sorghum. Sow main crops of potatoes. Hoe early potatoes; gather maize as it ripens; cut tobacco leaves as they arrive at maturity. Sow mangold and Swede turnips for winter food.

APRIL corresponds to October in Great Britain; cool weather is now setting in and nights are frequently chilly. In April, 1886, the weather was warmer than usual, the mean shade temperature, 72° being 1° over the average of the month for the previous ten years, and 2° over the previous three years. The highest reading in shade, 89 5°, was on the 1st, the lowest on grass, 50° 0°, was on the morning of the 24th. The highest barometric reading, 30.266 was at 9 p.m. on the 26th, and the lowest, 29.864 inches at 3 p.m. on the 17th. The mean barometric reading, 30.119 was 0.021 inches above the average of the month for the previous ten years. Rain fell on 10 days; the total fall, 1.74 inches, being 2.17 inches under the average of the month for the previous ten years, and 0.98 inches under the previous three years. The greatest fall in 24 hours, 0.41 inches, was on the 22nd. The total amount of rain that fell in the year 1886, up to the 30th April, was 17.15 inches, on 47 days. The rainfall during the same period in 1885, was 12.04 inches, on 48 days. The greatest rainfall in April, during 26 years, was 15.28 inches, on 19 days, in 1867, and the least rainfall was 0.32 inches, on 4 days, in 1872. The average rainfall of the month for 26 years, was 4.69 inches, and 14 days.

Garden, Orchard, and Farm Calendar for April.

GARDEN AND ORCHARD.—Keep down weeds by continual hoeing. Thin out plants that are overcrowded. Divide and plant out pot herbs, giving water if requisite, until they are established. Plant out cabbages, cauliflowers, &c., in favorable weather. Sow English beans, mustard and cress, lettuce, endive, leek, onions, peas, radish, &c., for succession. Sow hardy annual flower seeds. Evergreen shrubs, roses, and bulbs may be planted. Where practicable, the transplanting of fruit trees should now be proceeded with; and, if done with care, with as much earth as possible round the roots, they will soon emit new roots, and be established in their positions before the final fall of the leaf. This applies specially to evergreen fruit trees, such as lemons, oranges, dates, mangoes, loquats, olives, tamarinds, &c. In transplanting, take care that a sufficiently large hole is dug to allow of the roots having

ample room; if any of the roots have been bruised or broken in the moving, let the damaged portions be cleanly cut off with a sharp knife; do not set the transplanted shrub or tree any lower in the new ground than in its original place. For some days it is well to shade it, either by matting on sticks, or any other contrivance that may answer the desired purpose, taking care that the wind does not blow it down. Water should also be freely applied till the tree has settled itself in its new position. Prop up bananas which have heavy bunches of fruit, as they are apt to be blown down by the winds now prevailing.

FIELD.—Sow vetches, lucerne, wheat, barley, oats, mangold and Swede turnips. Gather sorghum and luphee as they ripen, or the birds will either consume or scatter it. Plough land for future crops. Cut and house tobacco as soon as it arrives at maturity.

MAY corresponds to November in Great Britain. The Queensland winter may now be considered as having begun. Weather generally cool and enjoyable. In May, 1886, the weather was warmer than usual, the mean shade temperature, 67°0, being 1°10 over the average of the month for the previous ten years, and 1°30 over the previous three years. The highest reading in shade, 85°0, was on the 7th, the lowest on grass, 40°5, was on the morning of the 13th. The highest barometric reading, 30·311 was at 9 a.m. on the 15th, and the lowest, 29·884 inches, at 3 p.m. on the 28th. The mean barometric reading, 30·150 inches, was 0·069 over the average of the month. Rain fell on 8 days; the total fall, 3·73 inches, being 1·14 inches under the average of the month for the previous ten years, and 1·68 inches under the previous three years. The greatest fall in 24 hours, 1·53 inches, was on the 28th. The total amount of rain which fell in the year 1886, up to 31st May, was 20·88 inches, on 56 days. The rainfall during the same period in 1885 was 13·25 inches on 56 days. The average rainfall for the month of May, during the previous 26 years, was 3·20 inches, on 9 days. The greatest rainfall in May, during 26 years, was 13·85 inches, on 20 days, in 1876, and the least rainfall was 0·12 inches, on 4 days, in 1860.

Garden, Orchard, and Farm Calendar for May.

GARDEN AND ORCHARD.—Transplant onions, garlic, eschalots, rhubarb, etc. Sow lettuce, endive, leek, onion, peas, radish, mustard and cress, cabbage, turnip, carrot, parsley, and pot herbs. Dig beds intended for asparagus. In making beds choose the best soil which the garden affords; the ground must be dug deep and most plentifully manured. Rhubarb may now be planted in deeply-dug, well manured beds. The onion crop sometimes suffers severely from the ravages of a green grub, which is in some soils in large numbers. They come out at night, and eat off the young onions level with the surface as if cut off with a knife. Land intended for this crop should be previously examined for these pests, and if possible receive a dressing of soot, which would not only prove very obnoxious to the grubs, but would be a valuable manure for the onions.

Transplant fruit trees and evergreen shrubs, do not plant too deep; put fine mould among the roots, making it firm, using water copiously unless the soil is wet. Transplant strawberries into leaf mould or well decayed cow dung, giving them abundance of water during their growing season. In cold situations, protect tropical fruit trees, and throw a little hay over the pine apple plants, with the same object.

FIELD.—Sow vetches, barley, oats, rye, wheat, also lucerne and other grasses. Cut tobacco. Earth up potatoes. Rye, as green fodder, is much relished by cattle and horses, and if not allowed to go to seed, it will make a good sward for grazing over, being green and succulent during winter and early spring.

JUNE corresponds to December in Great Britain; weather generally cool, with fine clear nights and sometimes heavy dewfall. In June, 1886, the weather was warmer than usual; the mean shade temperature, 62.3°, being 1.8° over the average of the month for the previous ten years, and 0.2° over the last three years. The highest reading in shade, 76.0°, was on the 3rd, the lowest on grass, 46.0°, was on the morning of the 27th. The highest barometric reading, 30.515 inches, was at 9 a.m. on the 27th, and the lowest, 29.936 inches, at 3 p.m. on the 23rd. The mean barometric reading, 30.236 inches, was 0.104 inches over the average of the last ten years. Rain fell on 17 days; the total fall, 5.39 inches, being 3.72 inches over the average of the month for the last ten years, and 3.76 inches over the last three years. The greatest fall in 24 hours, 1.59 inches, was on the 11th. The total amount of rain which fell in the year 1886, up to the 30th June, was 26.27 inches, on 73 days, being within 0.58 inches of the total fall of 1885. The rainfall during the same period, in 1885, was 15.59 inches, on 65 days. The average rainfall for the month of June, during the previous 26 years, was 3.26 inches on 8 days. The greatest rainfall in June, during 26 years, was 14.03 inches, on 15 days, in 1873, and the least rainfall was 0.04, on 3 days, in both 1880 and 1881.

Garden, Orchard, and Farm Calendar for June.

GARDEN AND ORCHARD.—No colonial grown cabbage seed should be sown until after September as it runs to seed when the plants are ready to heart. The English seed does not run until the second season, and will therefore heart perfectly. Transplant horseradish, eschallots, rhubarb, strawberries, sea-kale, etc. Dig over old rhubarb, sea-kale and asparagus beds, giving them plenty of good rotten manure. Sow brocoli, Brussels sprouts, cabbage, red cabbage, cauliflower, lettuce, endive, peas, English beans, radish, etc. To grow water-cresses dig a trench, as if for celery; turn in abundance of well-decayed manure, at the bottom, sifting some fine soil over it, and dibble the cuttings in at a foot apart, give the whole a good watering. Orange trees which are not in good health should have their trunks and large branches scrubbed with a scrubbing brush, and washed clean before the spring growth commences. The surface soil to the full circuit of the foliage of the

tree should have a dressing of stable manure. Apple trees affected with American blight should have the earth removed from the roots near the surface, and they should be painted with castor oil, or strong Gishurst Compound. Some sorts of apple are "blight proof," and these should have the preference when planting, as far as practicable; and the others should be worked upon stocks which are blight proof. Transplanting fruit trees and vines should be proceeded with vigorously. Prune fruit trees and vines, protect bunches of bananas in cold situations, by covering each with a light bag open at the bottom.

FIELD.—The arrowroot will fill out rapidly as the cold checks the growth at the top. Sow oats, lucerne, rye grass, vetches, prairie grass, etc. Prepare land in warm situations, for sowing with maize, and planting with potatoes next month. Early sown wheat often escapes rust and other ills which affect later crops.

JULY corresponds to January in Great Britain, and like it, is the coldest month of the year, though the sun has considerable power in the middle of the day. In July, 1886 the weather was slightly warmer than usual, the mean shade temperature, 61.4°, being 1.4° over the average of the month for the previous ten years, and 0.8° over the previous three years. The highest reading in shade, 76.0°, was on 21st, the lowest on grass, 39.0°, was on the morning of the 13th. The mean barometric reading, 30.157 inches, was 0.003 inches over the average of the month; the highest reading, 30.484, was at 9 a.m. on the 4th, and lowest, 29.816 inches, at 3 p.m. on the 27th. Rain fell on 15 days; the total fall, 4.29 inches, being 2.10 inches over the average of the month for the previous ten years, and 2.33 inches over the previous three years. The greatest fall in 24 hours, 2.68 inches, was on the 26th. The total amount of rain which fell in the year 1886, up to the 31st July, was 30.56 inches, on 88 days. The rainfall, during the same period in 1885, was 15.64 inches, on 67 days. The average rainfall for the month of July, during the previous 26 years, was 2.51 inches, on 8 days. The greatest rainfall in July, during 26 years, was 8.48 inches, on 17 days, and the least rainfall was 0.05 inches, on 2 days, in 1885.

Garden, Orchard, and Farm Calendar for July.

GARDEN AND ORCHARD.—Plant asparagus beds. Sow cauliflowers, carrots, beans, lettuce, endive, radish, spinach, etc. When sowing seeds after rain, see that the land is in a friable condition; if too wet, it will clog and bind together. The soil should never be walked over or disturbed by sowing or digging the crops until it is sufficiently dry to be friable. Plant out onions and escalots. Three or four days after planting, rake the soil between the rows in the dry weather, it will kill thousands of young weeds. Finish pruning fruit trees and vines. Plant out fruit trees and vines, and cuttings of grape vines, and such trees as are propagated in that manner. Graft young orange trees. The Seville orange forms the best stock upon which to graft approved sorts. Prepare land hitherto neglected, that all planting may be finished by the end of next month if

possible. Eradicate docks, and give a dressing of salt to the vines and fruit trees, lightly forking in well-decayed manure where necessary.

FIELD.—Finish planting lucerne. Sow oats, vetches, etc. Prepare land for potatoes, maize, tobacco, sugar-cane, carrots, mangold wurtzell, chicory, etc. Plant potatoes and maize. Take up and prepare arrowroot as the crop matures.

HINTS.—Never grow the same crops, nor crops of the same family twice on the same spot, without an intervening crop of a different nature.

Never transplant shrubs, or trees in a growing state. However carefully it may be done the check is dangerous and often fatal.

Let the drainage of the ground be your first care. It is impossible to succeed to any extent with vegetables or flowers, when the water is stagnant in the soil.

AUGUST corresponds to February in Great Britain, and is for the most part cold, but towards the end a rise in the temperature may be noticed. In August, 1886, the weather was warmer than usual; the mean shade temperature, 64.6°, being 1.3° over the average of the month for the previous ten years, and 0.7° over the previous three years. The highest reading in shade, 80°, was on the 9th, the lowest on grass, 41°, was on the 13th. The highest barometric reading, 30.48 in., was at 9 a.m. on the 25th, and the lowest, 29.71 in., at 3 p.m. on the 15th. The mean barometric reading, 30.04 in., was 0.109 in. under the average of the month. Rain fell on nine days; the total fall, 3.83 in., being 1.69 in. over the average of the month for the previous ten years. The maximum fall in twenty-four hours, 1.06 in., was on the 29th. The total amount of rainfall during the year 1886, up to the 31st August, was 34.39 in., on ninety-seven days. The rainfall during the same period in 1885 was 58.89 in. on seventy-two days. The average rainfall for the month of August during the previous twenty-six years was 2.53 in. on seven days.

Garden, Orchard, and Farm Calendar for August.

GARDEN AND ORCHARD.—Peas sown this month should have a cool aspect. A dressing of salt at this season at the rate of 7 or 8 lbs. to the perch would be a great advantage to most soils, tending to sweeten the land, destroy insects, discourage weeds, fungus, and mildew, and to retain moisture. Sow beet, broccoli, melons, Brussels sprouts, cucumber, lettuce, endive, okra, parsley, pumpkins, vegetable marrow, radish, rhubarb, round spinach, tomato, tobacco, carrot, (large sowing), leek, cabbage, cauliflower, chervil, turnip, parsnip, etc. Plant out horseradish, rhubarb roots, herbs, sea-kale, asparagus, Jerusalem artichokes, ginger, etc. Destroy weeds while young, and syringe with Gishurst Compound, or with strong soap suds in which a little kerosine has been well mixed, plants which are attacked with aphids. Endeavour to finish planting fruit trees, vines, and other plants, as the sun will be gaining power, which will increase the labour and risk. Young orange trees which show too much bloom

should have it removed, and receive a little liquid manure to promote foliage. If any of the orange trees are affected with the aphids, they should be well syringed with a solution of Gishurst Compound, or of water in which a small quantity of soft soap and sulphur have been dissolved. A small quantity of kerosine in a bucket of warm water has been found very effectual against scale, blight, etc. It should be well mixed, syringed on and kept from the roots of the trees. Graft China pears as they break very early. Any work left over from last month should be completed. Keep the land clean and the surface open to receive the dews and showers. Earth nuts are a profitable crop in light friable soil, especially near the sea shore, and in soil having lime in it.

FIELD.—Keep the crops clean. Plant potatoes, maize, rice, yams, arrowroot, etc. Hoe up potatoes. Sow sorghum, imphee, teosinte, and tobacco. Silk worms will now require constant attention, feeding them frequently with young tender leaves.

SEPTEMBER corresponds to March in Great Britain. In September, 1885, the weather was slightly warmer than usual, the mean shade temperature, 69° , being 1° over the average of the month for the previous ten years, and 0° over the previous three years. The highest reading in shade, 92° , was on the 23rd, the lowest on grass, 42° , was on the morning of the 1st. The highest barometric reading, 30.458 inches, was at 9 p.m. on the 7th, and the lowest 29.730 inches, at 3 p.m. on the 23rd. The mean barometric reading, 30.184 inches, was .105 inches over the average of the month. Rain fell on 10 days; the total fall, 0.89 inches, being 1.22 inches under the average of the month for the previous ten years. The greatest fall during 24 hours, 0.26 inches, was on the 16th. The total rainfall for the year 1885, to September 30th, was 16.78 inches, on 82 days. The rainfall for the same period, in 1884, was 31.50 inches, on 102 days.

Garden, Orchard, and Farm Calendar for September.

GARDEN AND ORCHARD.—As summer grass and other summer weeds now make their appearance, it is important to keep the land thoroughly clean. Take every opportunity to collect manure of all kinds, to be thrown into well-puddled tanks to rot down for use in autumn and winter. Valuable lessons may be learned from the Belgian farmers upon this important but much neglected subject. The Japanese are also vastly superior to us in the knowledge and practice of manuring. During the summer months in this colony manure should generally be applied in the liquid form. See that crops are not planted too closely so as to be crowded. Trench vacant land, in preparation for future crops, leaving the surface rough, to mellow by exposure. Sow English and French beans, parsley, beet, capsicum, chilli, cardoons, mustard, cress, lettuce, endive, eggplant, okra, Cape Gooseberry, radish, rhubarb, round spinach, tomato, tobacco, cucumber, melons, pumpkins, vegetable marrow, carrots, parsnips, etc. Trans-

plant cabbages, cauliflowers, eschalots, etc. Plant Jerusalem artichokes, rhubarb roots, herbs, sea-kale, asparagus, ginger, earth nuts, etc. Sow rosella. In dry weather give recently planted fruit trees sufficient water at the roots, leaving the surface to be kept damp by a mulching of stable litter. Destroy all caterpillars that infest the vines about this time. Attend promptly to the disbudding of grape vines; removing all suckers and superfluous shoots as soon as they appear. Tie up fruiting shoots to the trellises as they advance. Graft apples and pears.

FIELD.—Keep the land clean and loose among growing crops. Plant arrowroot, yams, sweet potatoes, tobacco, etc. Sow implee, sorghum and maize for green fodder. The sunflower may now be sown. Continue planting and hill potatoes, and finish cotton pruning. This is the best season for making plantations of coffee, tea, allspice, cinnamon, cocoa, etc.

OCTOBER corresponds to April in Great Britain; the weather begins to be unpleasantly hot, with occasional thunder and sometimes heavy hailstorms. In October, 1885, the weather was much warmer than usual, the mean shade temperature, 72°·2°, being 0°·3°, over the average of the month for the previous ten years, and 0°·5° under the average of the previous three years. The highest reading in shade, 91°·0°, was on the 13th, the lowest on grass, 51°·0° was on the morning of the 1st. The mean barometric reading, 30·190 inches, was 160 inches over the average of the month; the highest reading, 30·511 inches, was at 9 p.m. on the 17th, and the lowest, 29·907 inches, at 3 p.m. on the 12th. Rain (which varies much in quantity during the month) fell on 7 days; the total fall, 1·46 inches, being 2·12 inches under the average of the month for the previous ten years. The greatest fall during 24 hours, 0·78 inches, was on the 26th. The total rainfall for the year 1885, to 31st October, was 18·24 inches, on 89 days. The rainfall during the same period, in 1884, was 32·26 inches, on 110 days.

Garden, Orchard, and Farm Calendar for October.

GARDEN AND ORCHARD.—Keep crops clean, mulch them and give water where necessary. Sow parsley, English beans, French beans, mustard, cress, lettuce, endive, okra, radish, round spinach, beet, vegetable marrow, melon, carrot, cucumber, tomato, rosella, etc. Sow St. John's Day cabbage, which is the best for summer culture, being early, hardy, of fair quality, and notwithstanding heat, dry weather, and aphids, better than any other. Convert all waste vegetables into manure in some form; either to feed pigs, or throw them into the tank to rot, or burn them out of the way, and use the ashes. Thin out the fruit on China peaches of all kinds, and carefully eradicate the suckers which spring from the root, cutting them close to their origin neatly with a knife. Remove all the strong watery shoots which fill up the inside of the tree, so as to admit sun and air, and leave the whole strength of the plant to mature the crop. Support the branches of the trees as the fruit

swells. Examine the orange trees and if either thrip, smut, coccus, or fungus appear on the stems, scrub them as recommended in June. Tie up the vines as they grow, being careful not to injure the foliage (which performs the functions of both lungs and stomach for the plant), and see that the fruit is sufficiently protected from the direct rays of the sun. It is a good plan in order to secure fine fruit, to thin out with a pair of sharp pointed scissors some of the grapes in overcrowded bunches, this enables the grapes that are left to expand. Sulphur the vines on the first appearance of Oidium. Plant bananas and pine apples. Trench and drain the land intended for planting fruit trees in the winter; and if well cultivated, one crop taken from it would improve its texture.

FIELD.—Clean and earth up growing crops. Plant yams, earth nuts, coffee, arrowroot, ginger, sweet potatoes, and sugar-cane. Sow sorghum, mullee, etc.

NOVEMBER corresponds to May in Great Britain. Summer has now fairly set in. In November 1885, the weather was cooler than usual, the mean shade temperature, 75°5', being 0°6' under the average of the month for the previous ten years, and 1°6' above the average of the previous three years. The highest reading in shade, 93°0', was on the 28th, the lowest on grass, 53°5, was on the morning of the 5th. The mean barometric reading, 30°094 inches, was 130 inches above the average of the month; the highest reading, 30°349 inches, was at 9 a.m. on the 4th, and the lowest, 29°717 inches, at 3 p.m. on the 1st. Rain (which varies much in quantity during this month) fell on 10 days; the total fall, 2·62 inches, being 0·69 inches under the average of the month for the previous ten years. The greatest fall during 24 hours, 1·00 inches, was on the 20th. The total rainfall for the year 1885, to 30th November, was 20·86 inches, on 99 days. The rainfall during the same period, in 1884, was 38·43 inches, on 125 days.

Garden, Orchard, and Farm Calendar for November.

GARDEN AND ORCHARD.—At this season the beds should have the ridges laid across the hills in sloping ground, so as to catch the showers. Thin cucumber and melon beds where overcrowded and loosen the soil if it is bound. Fasten down the shoots with wooden pegs so as to cover the ground evenly; it steadies the plants and protects them from much injury from the wind during storms. Sow French beans, melons, brocoli, brussels sprouts, mustard, cress, cucumber, lettuce, endive, celery, okra, radish, rosella, pumpkins, etc. Thin early peaches as soon as the fruit is fit for cooking. Mulch the trees a considerable distance around the stem. Clean out all superfluous shoots to throw the whole strength of the plant into the crop; not injuring or removing any of the foliage unnecessarily. Remove suckers from grape vines, stop straggling branches, and rub off weak ill-placed shoots. If vigorous old Isabella vines have the ripest of the present season's rods pruned during this and next month, they will give a second crop of fruit. The cuttings also, if

planted, will form strong roots before the planting season. Apricots and China peaches should be budded. Plant banana and pine apple suckers. Trench land intended for planting next season, to give it the sweetening influence of the summer's sun. Where pine apples are largely grown, it will pay to thin out the suckers early this month, as it not only causes the summer crop of fruit to be larger, but the young suckers which appeared on the pruned shoots will produce winter pine apples, which sell at a high price. The most convenient implement for thinning out, is the large strong-handled South Sea Island knife, kept sharp at both sides of the point, and used with a downward thrust.

FIELD.—Keep the land clean with the horse hoe. Stop tobacco plants as required, to direct the sap into the leaves intended for the crop, and remove caterpillars. In making oat hay, cut the crop when well in ear, but before the seed is near mature; the whole plant is then in the best condition.

DECEMBER corresponds to June in Great Britain. It is a month of usually fierce sunshine and cloudless skies; the nights are sometimes pleasantly cool. In December, 1885, the weather was much cooler than usual, the mean shade temperature, 76°6', being 2°2' under the average of the month for the last 10 years, and 2°1' under the average of the previous three years. The highest reading in shade, 89°, was on the 1st; the lowest on grass, 59°, was on the morning of the 26th. The mean barometric reading, 30.051 inches, was 143 inches over the average of the month; the highest reading, 30.296 inches, was at 9 a.m. on the 7th, and the lowest, 29.805 inches, at 3 p.m. on the 1st. Rain (which varies much in quantity during this month) fell on 13 days; the total fall, 5.99 inches, being 1.05 inches over the average of the month for the previous ten years. The greatest fall during 24 hours, 1.82 inches, was on the 15th. The total rainfall for the year 1885, was 26.85 inches, on 112 days, being 16.64 inches less than the rainfall of 1884, and 22.75 inches under the average of the previous 25 years.

Garden, Orchard, and Farm Calendar for December.

GARDEN AND ORCHARD.—The seeds should be protected during the summer months from the direct rays of the sun by some light cover a foot or two above the ground. Thin calico, or light open brushwood, not too dense would be suitable. If the seed beds were well watered with liquid manure, so as to thoroughly soak the soil, a few hours before sowing the seed, and the latter were covered by sifting over it some stable litter, there would not be so many failures even in summer. Sow cabbage, cauliflower, French beans, mustard, cress, lettuce, endive, okra, radish, etc. All vacant land should be well manured and dug two spits deep. Manure and dig as the crop comes off, and the land will be ready for planting after the first shower. Place straw under the peach trees upon which the fruit may fall without bruising. Strag-

gling wood shoots should be stopped, to keep the trees in form, and prevent the weaker branches being robbed of their share of nourishment. Trench and manure land intended for planting with fruit trees or vines. On the slightest appearance of Oidium among the vines or American blight among the apples, dress them as previously directed. Those who object to the use of sulphur and lime in their dry state may boil one pound of sulphur and one pound of lime in a gallon of water for half-an-hour; one pint of this, when strained, may be mixed with ten gallons of water, and applied to the affected vines with a syringe.

FIELD.—Keep crops clean. Dig potatoes as soon as ripe, as they will not keep in the soil; and have them collected as they are dug, or the sun will cause them to rot. Plant maize.

QUEENSLAND.

THE Colony of Queensland, formerly known as the Moreton Bay District—comprises the whole of the North-Eastern portion of the Continent of Australia; its boundaries being—on the North the Gulf of Carpentaria and Torres Strait, on the East the Pacific Ocean, on the West the Northern Territory of South Australia—the dividing line being the 141st meridian of longitude from the 29th to the 26th parallel, and thence the 138th meridian—and on the South the Colony of New South Wales. Its estimated area—exclusive of the Islands contiguous to the coast, which, however, belong to Queensland—is about 669,520 square miles, or 428,492,800 acres, being about twelve times the size of England and Wales. Its extreme length from N. to S. is 1300 miles, its breadth 800 miles, the coast line being about 2500 miles. REGISTRATION OF BIRTHS, MARRIAGES, AND DEATHS.

Every Birth must be registered within sixty days, and every death within thirty days next thereafter respectively; any neglect of this regulation renders the parties, whose duty it is to register, liable to a fine not exceeding £10. If sixty days have elapsed from the date of birth, the law requires the parent, or other person making the application to register such birth, to pay a fee of two shillings and sixpence, and to make a solemn declaration of the facts before a Justice of the Peace, prior to the registration. If possible in all cases the father or mother ought to sign as informant. If unable to write, let a mark be made. No birth can be registered after three years have elapsed from the date thereof; but a record will be made in the Registrar General's office if information be supplied respecting such a birth.

Every Minister who has celebrated a marriage, must within one month thereafter, transmit (in accordance with the Act 28 Victoria No. 15) the original certificate to the Registrar of the District, in which the marriage was celebrated, and every minister who fails to transmit the certificate to the District Registrar, is liable to a fine of NOT LESS THAN £10 and not exceeding £50. Marriages must be solemnised between the hours of 8 a.m. and 8 p.m. Persons under age must produce the written authority of parents or guardians, signed by them in the presence of a Justice of the Peace, Registered Minister, or District Registrar, or the marriage cannot take place.

In every case of Burial, the Minister or person officiating at any religious service at such burial, ought to receive from the undertaker or person having charge of the funeral, a certificate from the District Registrar, certifying the registration of the death, unless in the case of inquest, when a certificate from the Coroner or Magistrate holding the inquest, will be sufficient; and if any dead body shall be buried without such certificate, the person who may bury the same, or perform any funeral or religious service for the burial, or who shall in any way dispose of the body, shall forthwith give notice of the facts to the District Registrar. Undertakers are bound under a penalty not exceeding £10 to lodge with the District Registrar, IMMEDIATELY after the burial, a Certificate of such burial signed by themselves and COUNTERSIGNED BY TWO WITNESSES.

REGULATIONS.

Messages tendered for transmission must be written with ink in a legible manner, in plain language on the proper form, signed by the sender, and the address must contain all information necessary to avoid delay and ensure delivery.

Payment of all charges in advance will be required, except the following: Replies to interrogatory messages which contain the words "*Reply Paid*;" messages for transmission within the colony of Queensland, or to any of the Australian colonies, marked "*Collect*," when the sender is known to the officer in charge of the despatching station, and guarantees in writing that, in the event of the message not being paid for on delivery, it will be paid for on demand by the sender. In all such messages the word "*Collect*" must be written by the sender as the last word of the message to be despatched; press messages to be paid for at receiving station on delivery.

When the sender wishes to pay for a reply, or to have the message repeated or posted, instructions are to be inserted in the address immediately before the name of the terminal station. Messages which are addressed beyond the limits of delivery can be posted to their destination free of charge.

Telegrams supposed by the receiver to be incorrect can be repeated at half cost, and if found incorrect this amount will be refunded. (This does not apply to intercolonial messages.)

Messages will be delivered free within one mile of the station to which addressed. If beyond that distance, according to the instructions contained in the address. Expenses incurred for portage, cab hire, or boat hire, payable by the receiver, will be charged. Messages addressed beyond the limits of delivery, or which do not contain special directions as to transport, may be posted to their address by the terminal Telegraph Station free of charge. The sender or receiver of message, on proof of identity, may receive certified copies of messages on giving the date and paying a fee of one shilling for each copy. In the event of any interruption to communication by which messages may be unusually delayed, it will be optional with the senders, on application *before transmission*, to withdraw their messages and receive back the amount paid. If desired, messages of consequence can be repeated from stations at which received, to stations from which originally sent, on payment of an additional half rate; but no responsibility will be undertaken, nor any claim for compensation entertained, for any errors or mistakes in transmission or delay in delivery of messages.

Telegrams to stations within the colony marked "Urgent" will be received and transmitted as "Urgent messages," and will take precedence of all ordinary messages. Double rates are charged for these messages.

Envelopes containing messages for transmission by telegraph from any place in Queensland, posted at any Post Office not a Telegraph Office, with the words "Telegraph Message only" written thereon above the address, and directed to the nearest Telegraph Office, may be forwarded free of postage; and the officers in charge of the Telegraph Office to which such envelopes may be addressed shall transmit the message contained therein to its destination, provided the full fee, either in cash or postage stamps, be also enclosed.

⌚ A list of the Telegraph Stations in Queensland will be found in the Postal Gazetteer at page 74.

TELEPHONE EXCHANGE.

Telephone lines will be erected and kept in order by the Post and Telegraph Department, on payment in advance of an annual rental at the rate of £5 for the first mile or any intermediate distance, and a proportionate rate of 25s. for every additional quarter mile, or fraction thereof.

Instruments must be provided by subscribers, and where connected with Exchanges are maintained in working order by the Department, for which an extra annual charge of £1 for each instrument is made.

INTERNATIONAL TELEGRAMS.

By the system of registration of name and address, and the adoption of the word scale of charging, the cost of telegraphing between Brisbane (or any other leading town in Queensland) and London, and many of the principal cities of India, China, Japan, Europe, United States, and other countries, has been greatly reduced. It may be necessary to explain that the name and address of the sender and receiver being registered at the points of departure and arrival, a single word, letter, or number serves for their identification.

A record is open at the Brisbane Central Telegraph Office for the registration of the full address, at which foreign telegrams reaching Brisbane and bearing abbreviated or arbitrary addresses are to be delivered. No fee is charged for registration. Application for registration to be made by letter to the Superintendent of Electric Telegraphs. Registration can also be effected and messages sent through Reuter's Telegraph Company.

The Telegraph Companies register names and addresses of telegraph correspondents free of charge at all their stations, and in London at 11, Old Broad-street, 8, Lea-len-hall-street, and 3, Great Tower-street.

Addresses may also be registered at any Government Telegraph Office in England or Scotland upon payment of one guinea to the Postmaster-General, London. This registration can be effected only at the telegraph station in the town where the firm is established, and not by letter from Australia to London, or *vice versa*, as different firms sometimes select the same code word.

The principal conditions under which messages are transmitted, are as follows:—

Words must not exceed ten letters, otherwise they are charged as two words. Groups of figures will be charged at the rate of three to the word. Telegrams may be written in plain language, in code language, or in secret language.

EXPLANATION.—The name of Post Town or Post Office is first given; then follows its distance and bearings from Brisbane (or other town when specially mentioned); then whether it is a Money Order Office, Telegraph Station, Government Savings Bank, or Railway Station; name of Postmaster or Postmistress; and the day of the departure of the mail from Brisbane. When the locality is simply a Telegraph or Railway Station, it will be found indicated by the words "Tel. Stn." or "Railway Station." Distances are in some cases approximate only.

ABBREVIATIONS.—N.S.E.W. for the points of the compass; Tel. Stn. for Telegraph Station; Ry. Stn. for Railway Station; Mon., Tu., Wed., Th., Fri., Sat., for the days of the week.

There is now a daily overland mail to Sydney from Brisbane; time occupied in transit about 48 hours. The steamers for the North—Maryborough, Rockhampton, and intermediate ports, usually leave the Brisbane Wharves on Tuesdays and Fridays or Saturdays. The steamer leaving Brisbane on the Tuesday arrives at Maryborough on Wednesday, Gladstone on Thursday, and Rockhampton on Thursday night or Friday morning; and on its return leaves Rockhampton on Tuesday, Gladstone on Wednesday, Maryborough on Thursday, and arrives at Brisbane Thursday night or Friday morning.

The regular mail steamers for the North—Cooktown being the terminal Port—leave Brisbane early on Saturday mornings; they arrive at Keppel Bay on Sunday night, Flat Top Monday night, Bowen Monday night, Townsville Tuesday morning, Cairns Thursday morning, Port Douglas Thursday afternoon, and Cooktown Friday morning. On return they leave Cooktown on Saturday morning, arriving at Port Douglas at 4 p.m., Cairns at 9 p.m., Townsville on Sunday 3 p.m., Bowen on Monday 10.30 p.m., Flat Top Island Tuesday morning, Keppel Bay Wednesday morning, and Brisbane Thursday night.

When two of the same figure require to be shown, as 11 or 22, the White Pendant is used to indicate the second number—11 (Cork), would be shown by the Pendant for 1 and the substitute beneath it.

DIRECTIONS FOR MAKING A WILL.

A WILL should be made in the plainest language possible; it must be written with ink and must be signed at the end of each sheet (if there be more than one) by the Testator in the presence of TWO or more witnesses.

The witnesses, who must not be interested in the will, must strictly comply with every particular required by the Attestation clause, at the end of which clause they must sign their names. A witness need not know the contents of the Will, which may be so folded, that the Signature and Attestation clause alone can be seen.

FORM OF A WILL.

This the last Will and Testament of me (name) of (address) made this day of One thousand eight hundred and eighty as follows. I give, devise, and bequeath all my messages, lands, tenements, and hereditaments, and all my household furniture, ready money, money secured by life assurance, goods and chattels, and all other my real and personal estate and effects whatsoever, unto my dear wife for other person as may be] her heirs, executors, administrators, and assigns, to and for her and their own absolute use and benefit, according to the nature and quality thereof respectively, subject only to the payments of my debts, funeral and testamentary expenses, and the charges of proving and registering this my Will. And I appoint my said wife (or other person) executor of this my Will, and hereby revoke all other Wills.

In witness whereof I have hereunto set my hand the day and year above written.

ATTESTATION CLAUSE

Signed, published, and acknowledged by the said as and for his last Will and Testament, in the pre-

sence of us, who in his presence and at his request, and in the presence of each other, have subscribed our names as witnesses.

A CODICIL TO A WILL.

A Codicil is to be made with the same regulations as the Will itself, and may be written thus:—This is a Codicil to my last Will and Testament, bearing date the day of 188

and which I direct to be taken as part thereof. I give, devise, and bequeath &c. As witness my hand this day of 188

NOTE.—Obiterations and alterations of any sort in a Will ought, if possible, to be avoided; when they have to be made, they must be signed by the Testator and Witnesses on the margin, or as near to the attestation as possible.

Marriage after making a Will renders the Will void.

If a witness is interested in the Will the claim to such interest becomes forfeited.

If a person wishes to dispose of all his property in one gift, the words, "all my real and personal estate," may be used.

Personal property left without a Will, is divisible as under:—If the deceased should leave Children and no Widow, the whole property is to be divided equally among the Children. If he leave a Widow and Child or Children, the former is entitled to one-third, and the latter to the remaining two-thirds. If he leave a Widow and no Child, the former is entitled to half, and the next of Kin the remainder as follows:—A Father, the whole amount; if no Father, a Mother, Brothers or Sisters, or their issue, equal portions; if none, Uncles, Aunts, Nephews, and Nieces, equal portions.

The Nominees in these cases must not be above fifty-five years of age, in sound bodily and mental health, otherwise they will be rejected as ineligible at the port of embarkation. No person 55 years of age or over can be nominated.

Applicants must clearly understand that these Tickets do not include the Passage from the Continent to the port of embarkation in Great Britain, the entire cost of which must be defrayed by the Emigrant himself.

Any Immigrant landed at a port other than that at which the Nominor resides will be forwarded to his friends, either by rail or steamer, at Government cost.

Employers of labour who have been *bonâ fide* residents in the Colony for not less than six months, wishing to engage through their agents the services of Laborers or Servants in Europe, may do so by application to the Immigration Agent at Brisbane, or to any Clerk of Petty Sessions throughout the Colony, on payment of amounts according to the following scale:—

For Males between the ages of 15 and 45 years ...	£2 each.

The Labourers or Servants so engaged will be provided with Passages by the Government and landed at any port in the Colony touched at by the B. I. Co.'s steamers that the employers may desire. *Mechanics* and *Artizans* are not eligible to be indented except by special permission of the Minister, to whom every application to indent persons of either class is submitted for approval by the Immigration Agent before granting the Passage.

It is a Directory not only of Brisbane but of every Town of any importance whatever in Queensland.

Its Sailing Directions for the Navigation of Queensland waters are the only official ones published.

It is to be found in every Bank, Insurance office, and House of Business of any size in the Colony.

It is supplied annually to every leading Town throughout the United Kingdom.
